# Epigenetics

## Nature AND Nurture

### Chromosome 3 Pairs

3-year old twins vs. 50-year-old twins

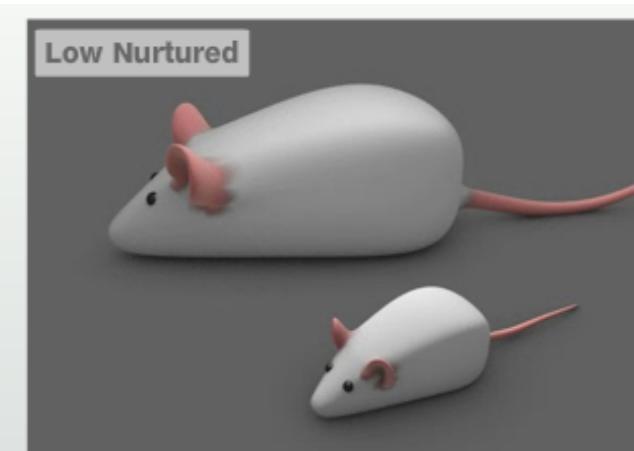

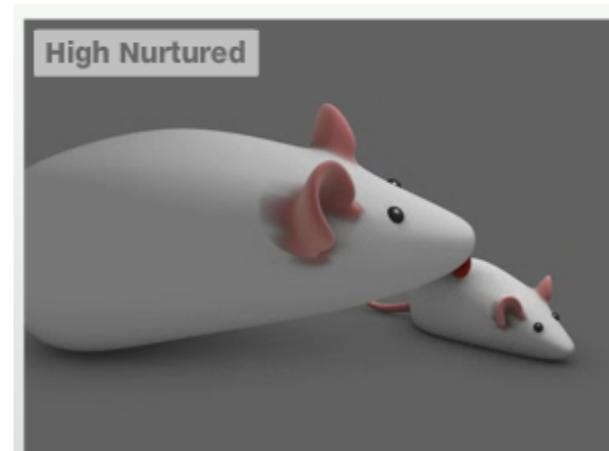

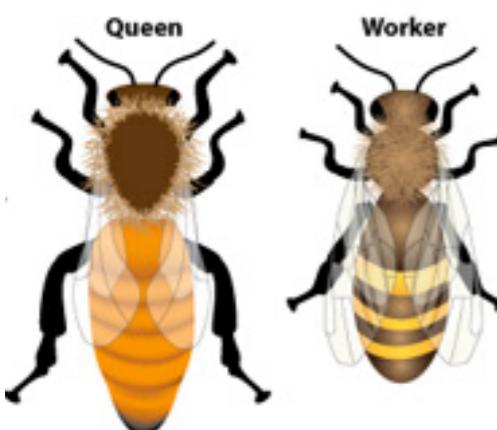

Yellow shows where the twins have epigenetic tags in the same place.

Red and green show where the twins have epigenetic tags in different places.

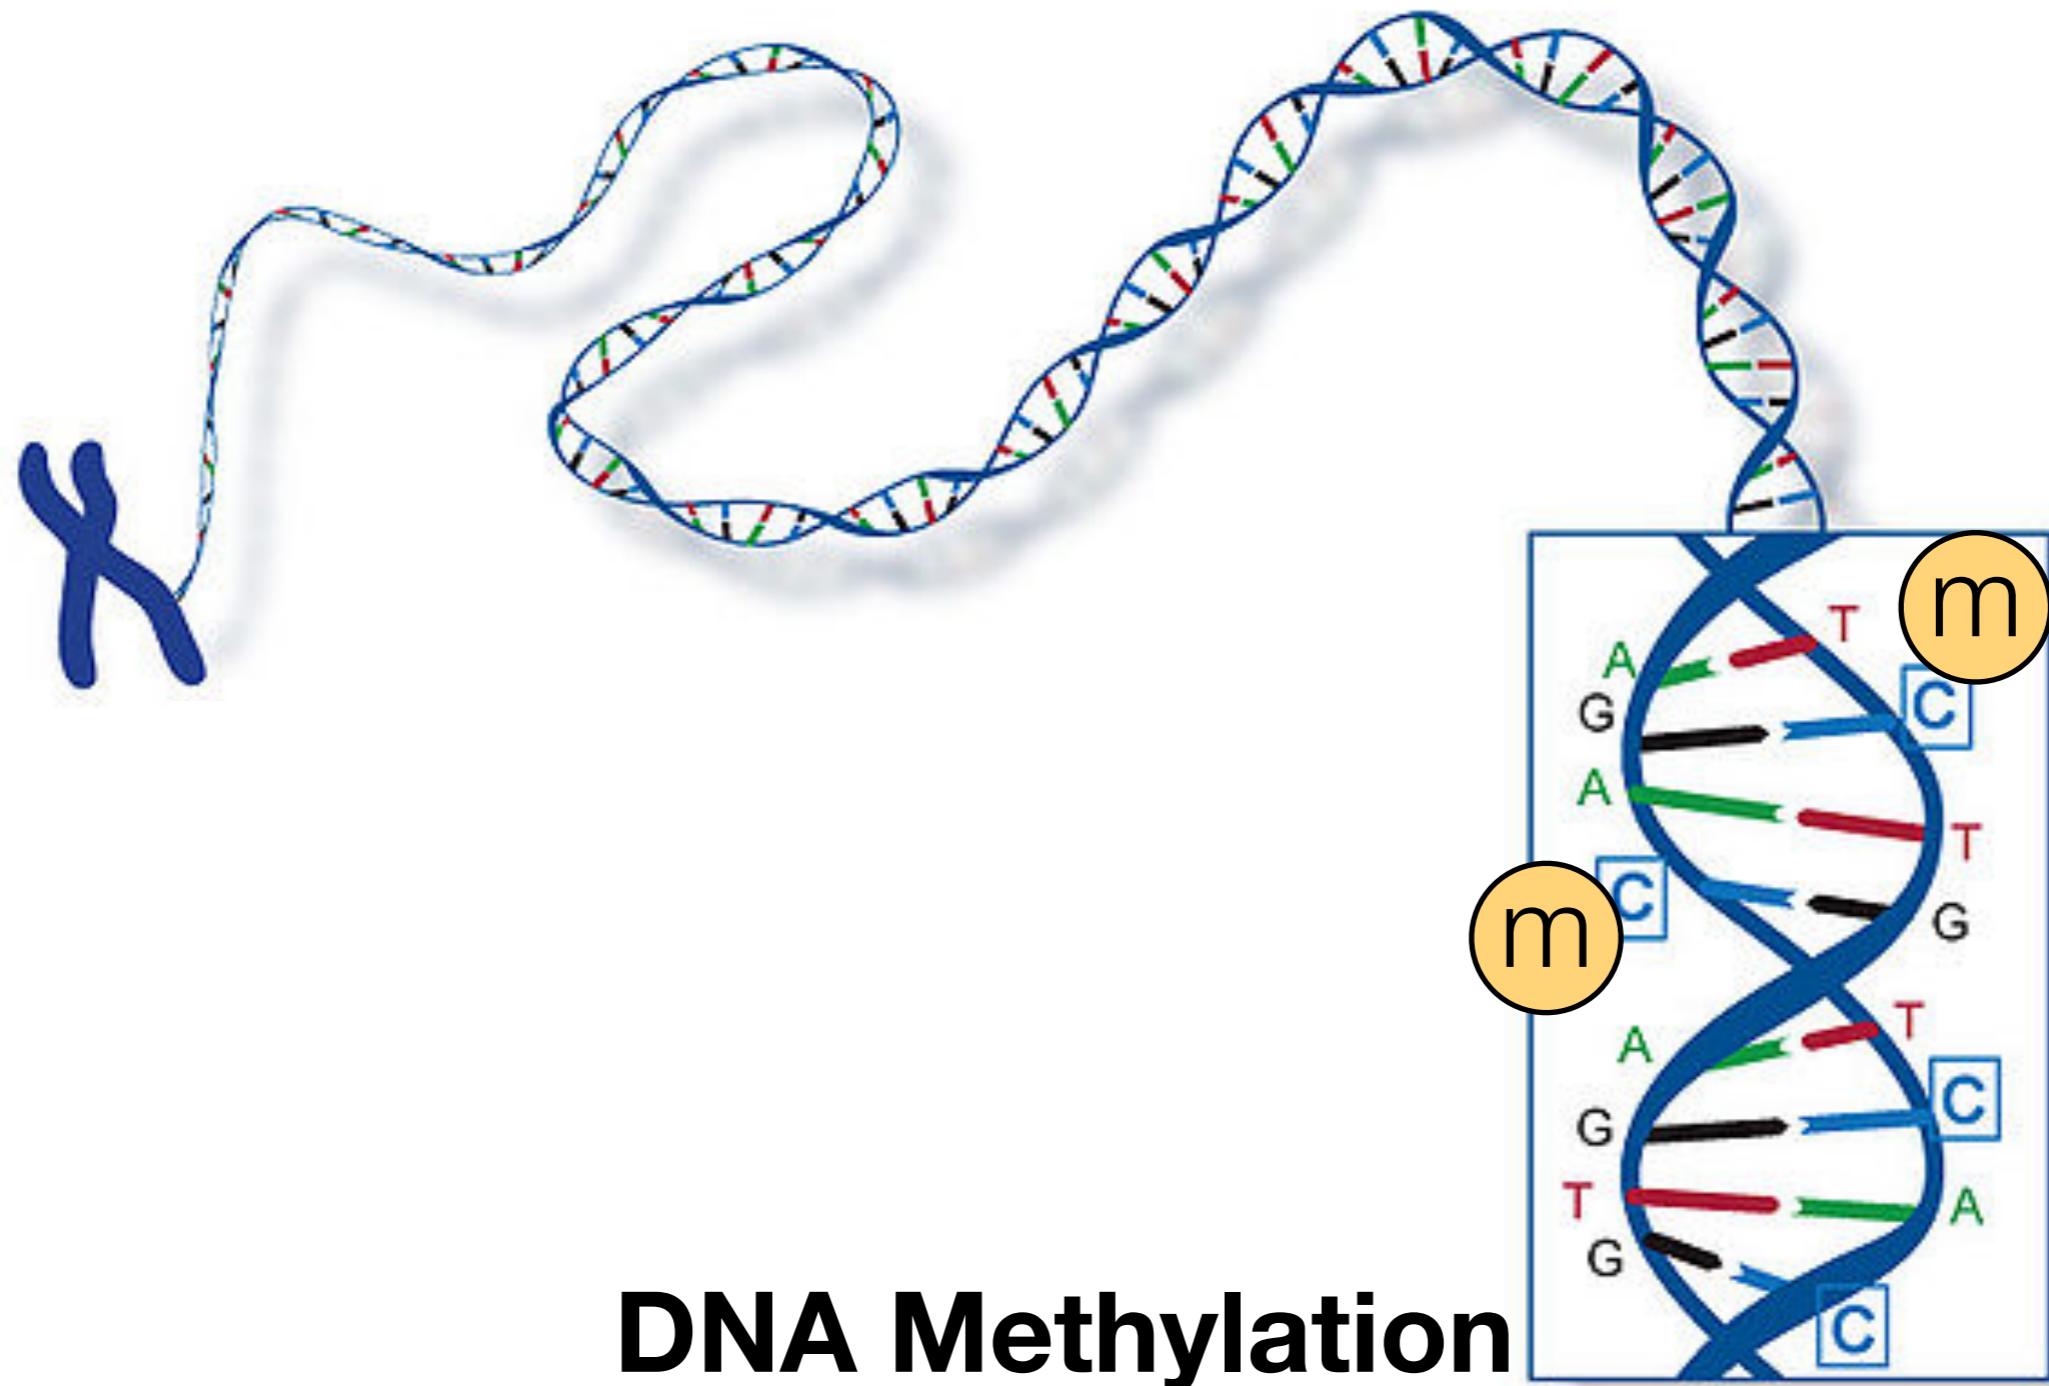

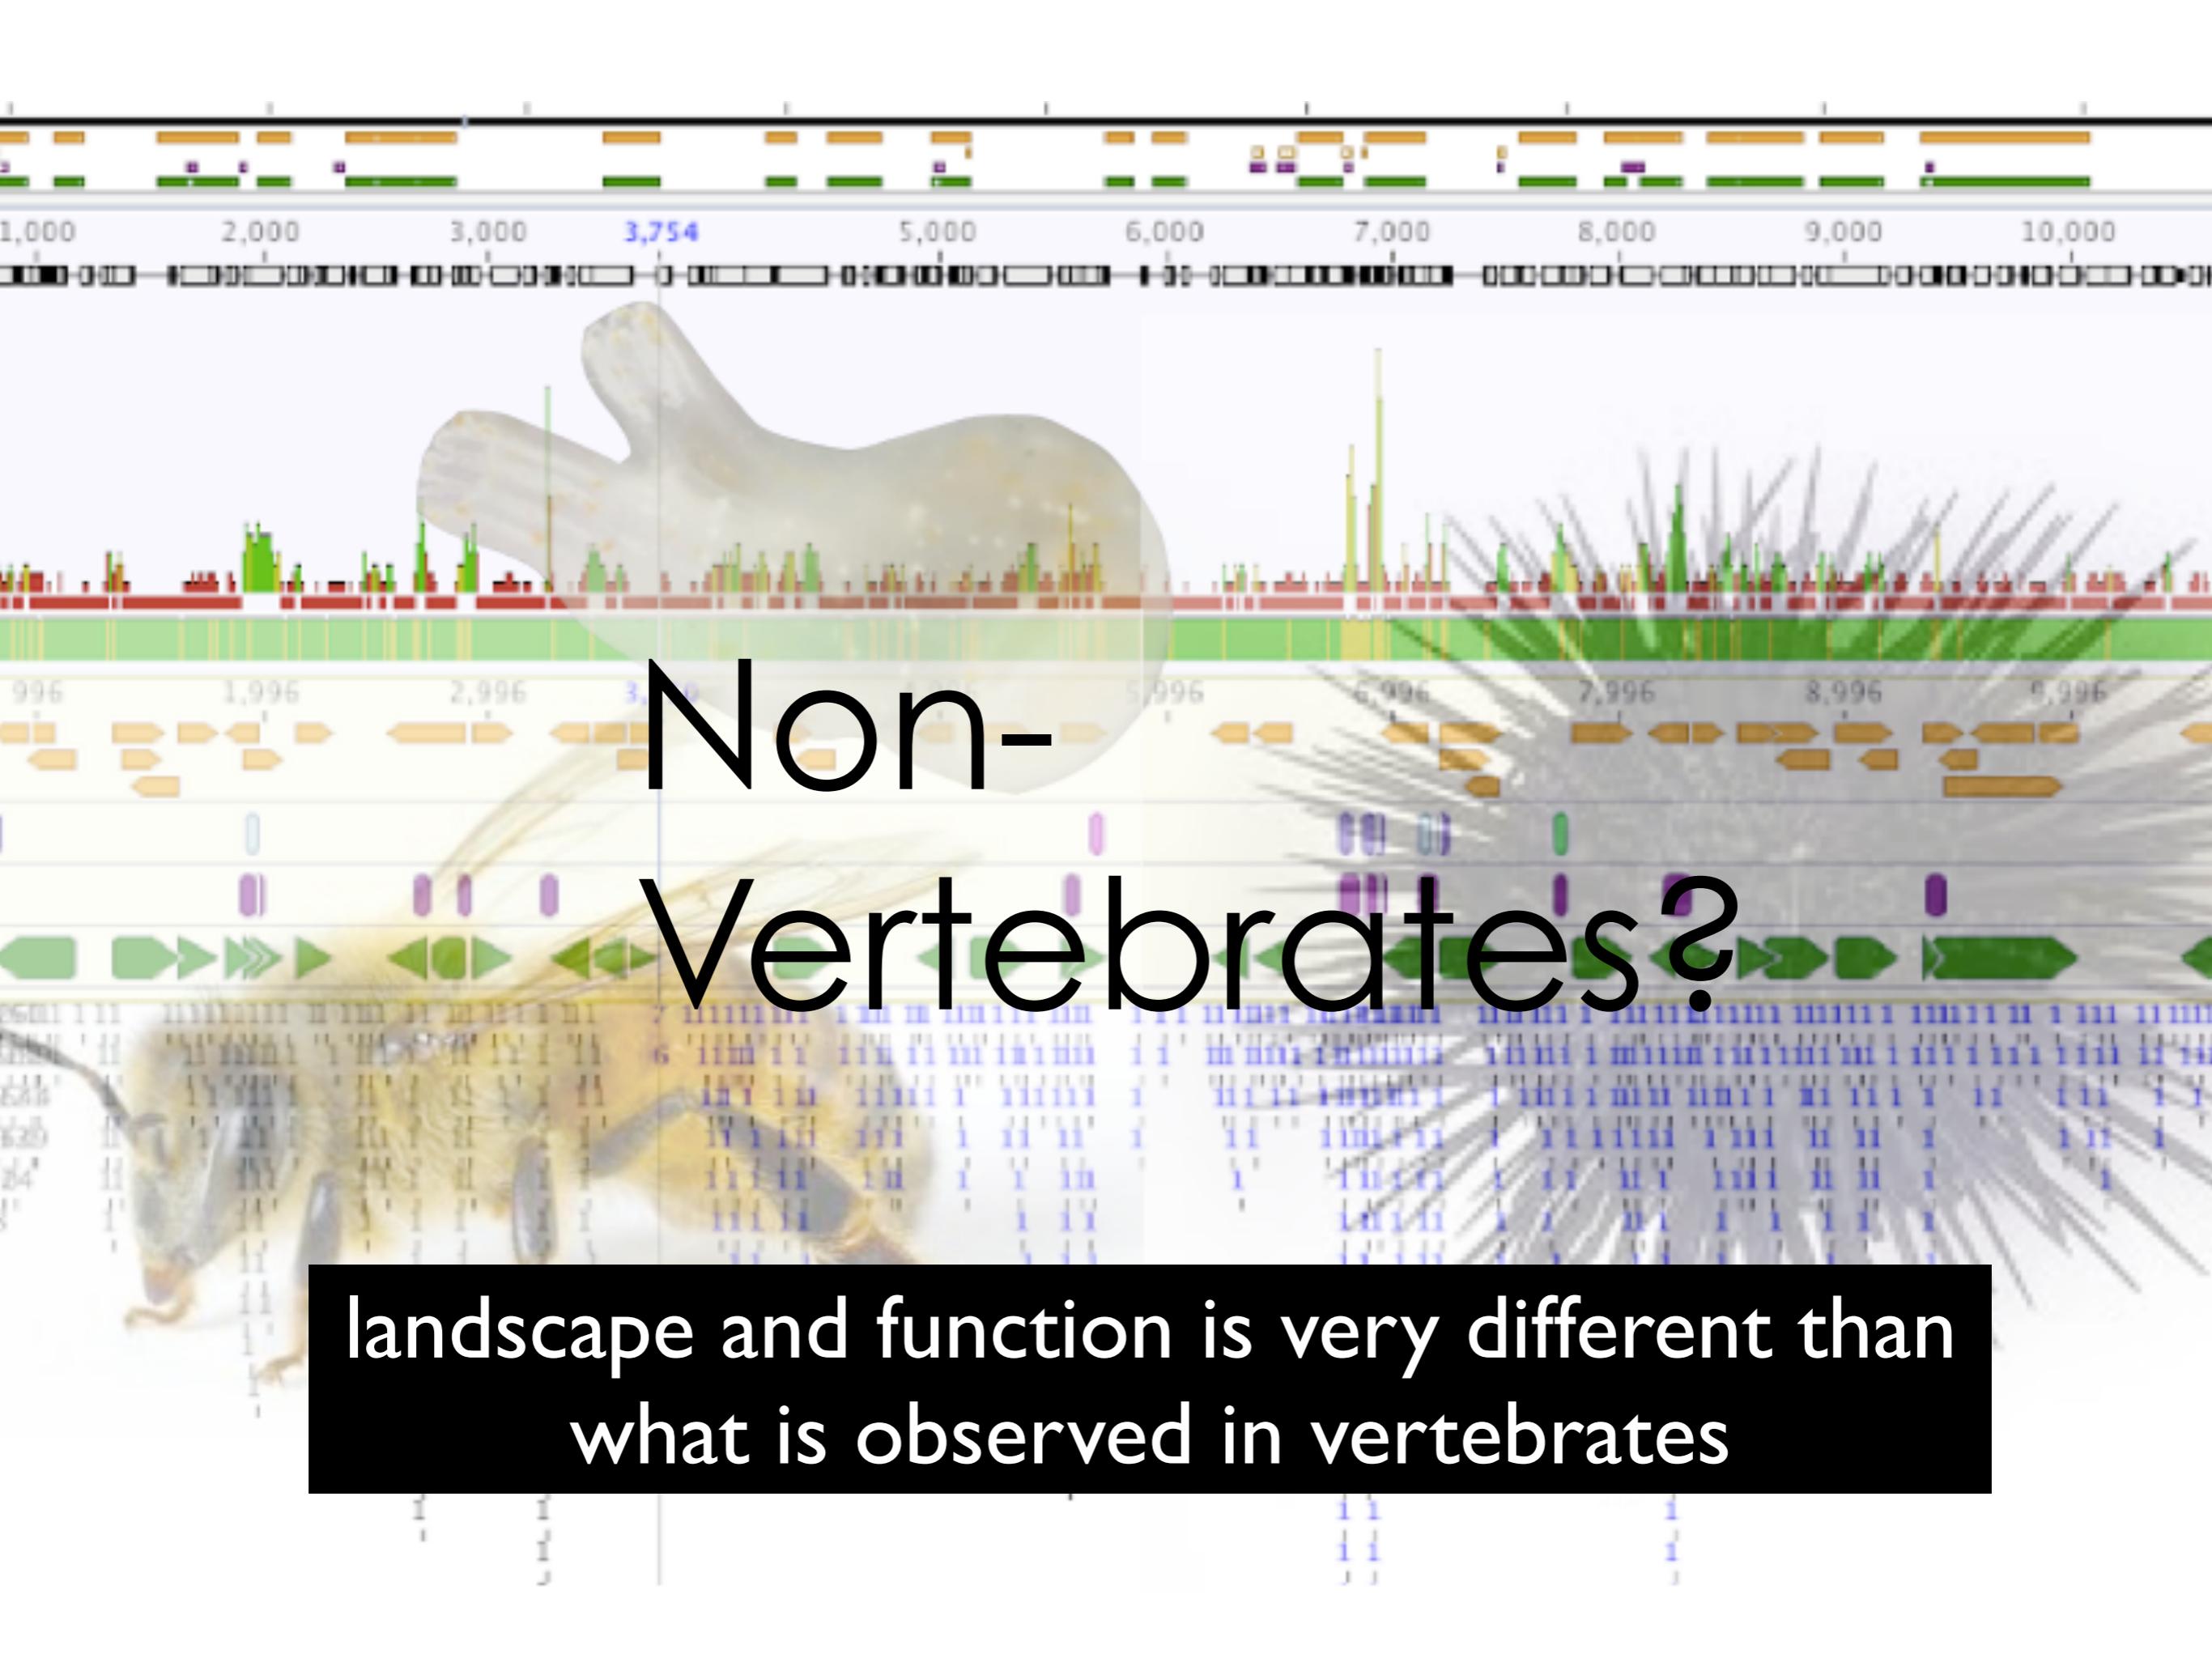

Queen Bee Larvae: Queens are raised in specially constructed cells called "queen cups," which are filled with royal jelly.

These mothers come from a long line of inbred rats, so their genomes are highly similar. But they care for their pups very differently.

Measured degree of DNA methylation

## Enrichment level in MBD-Seq library

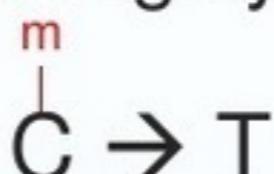

## *in silico* analysis

(modified from Gavery and Roberts 2010)

Predicted degree of DNA methylation

# *in silico* approach

- Principle:
  - Methylated cytosines are highly mutable

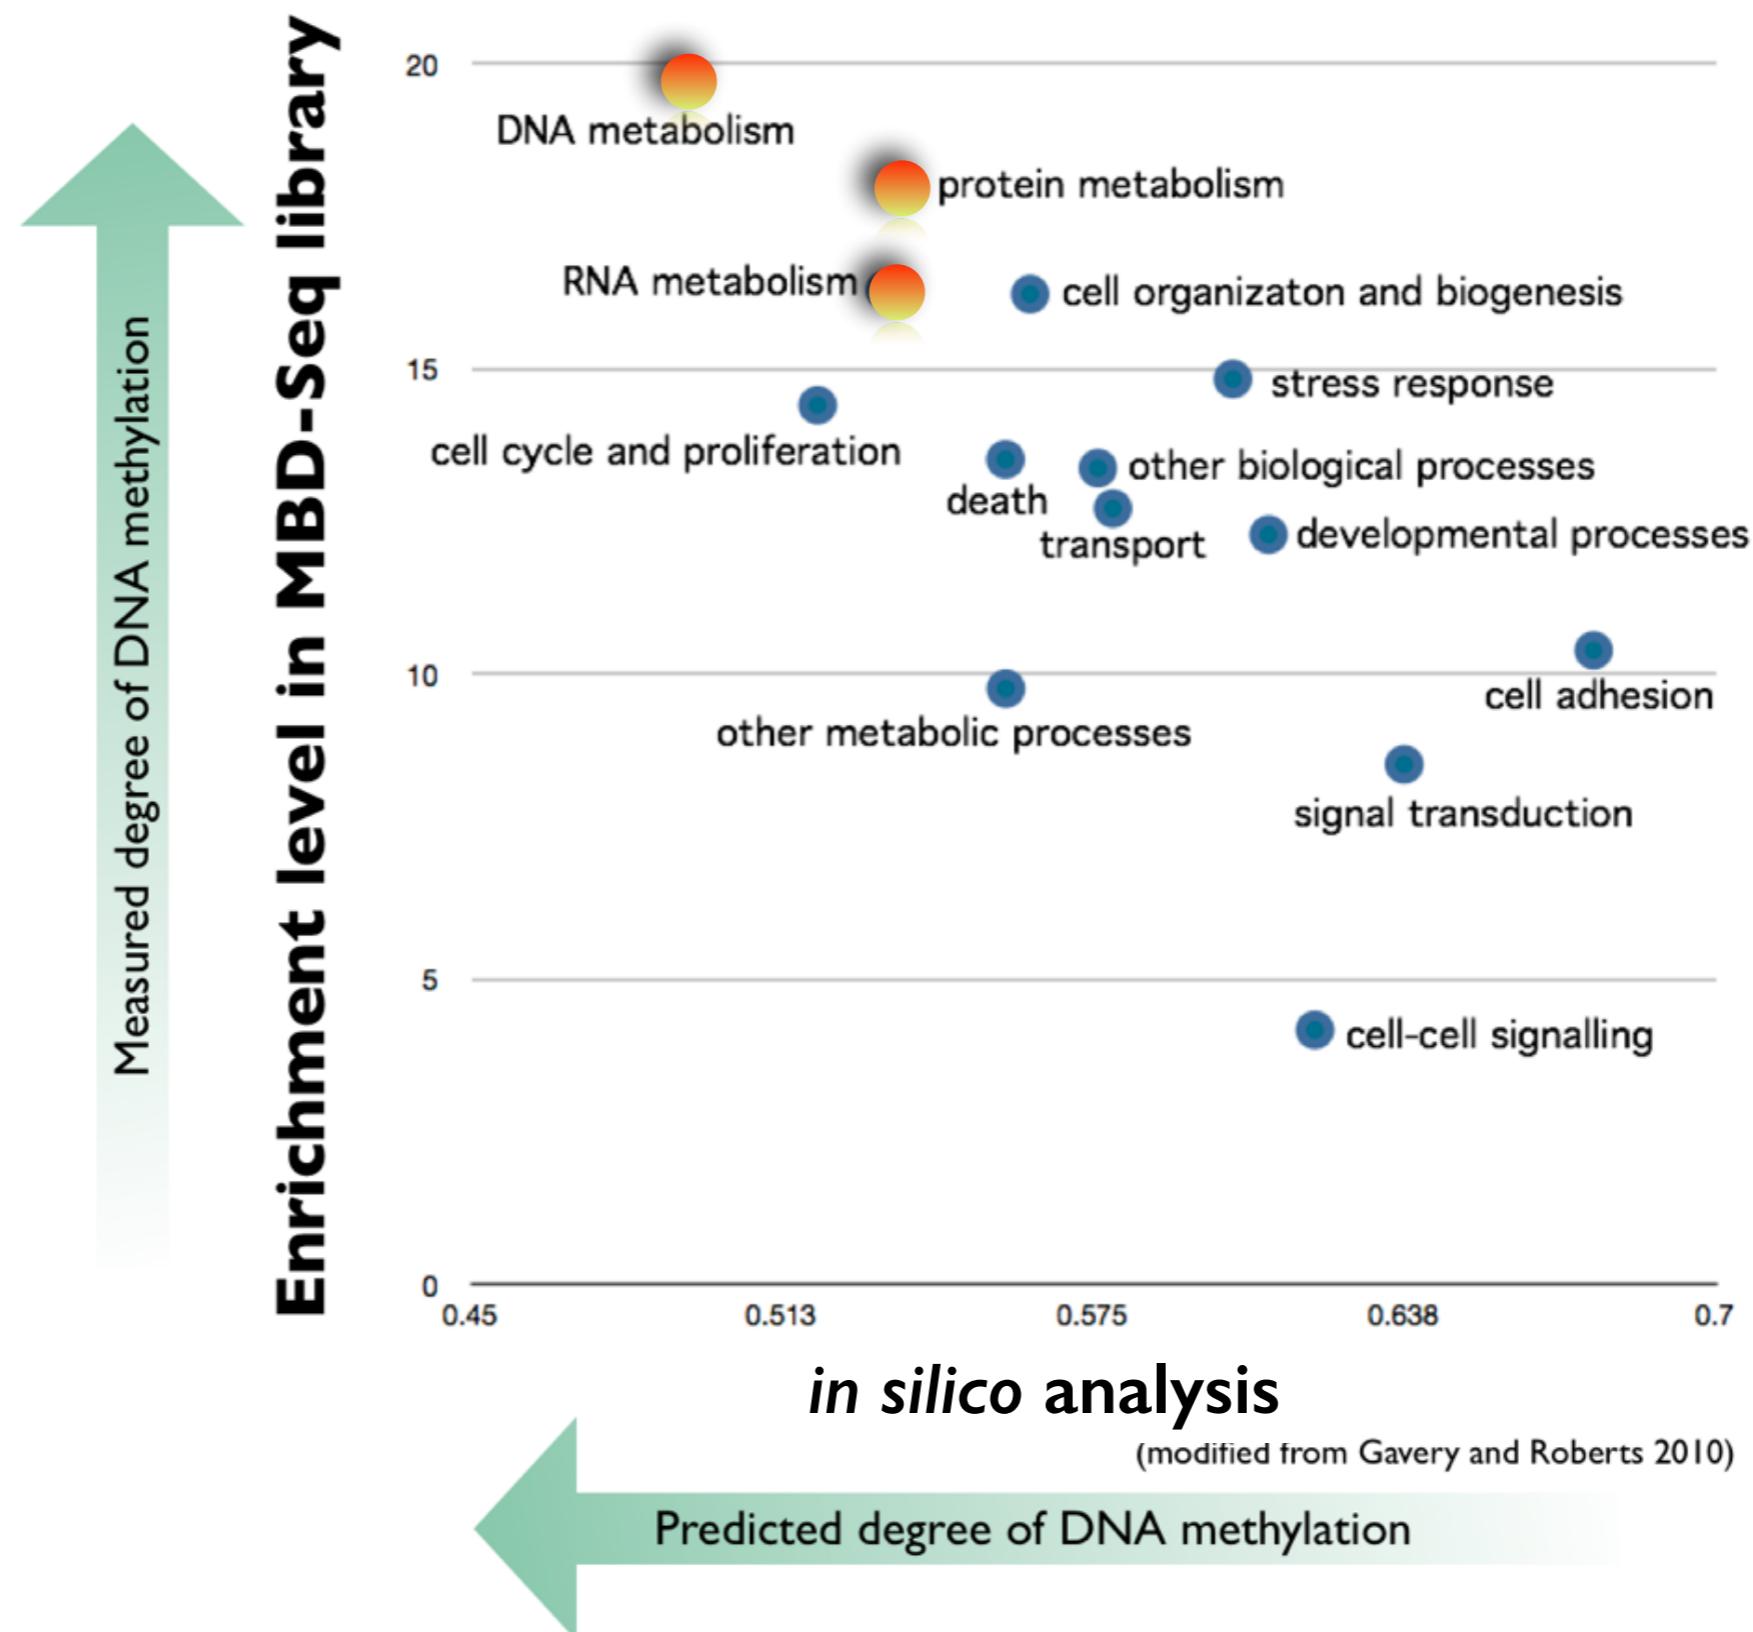

- Methylated regions of DNA are depleted of CpG dinucleotides over evolutionary time (CpG to TpG)

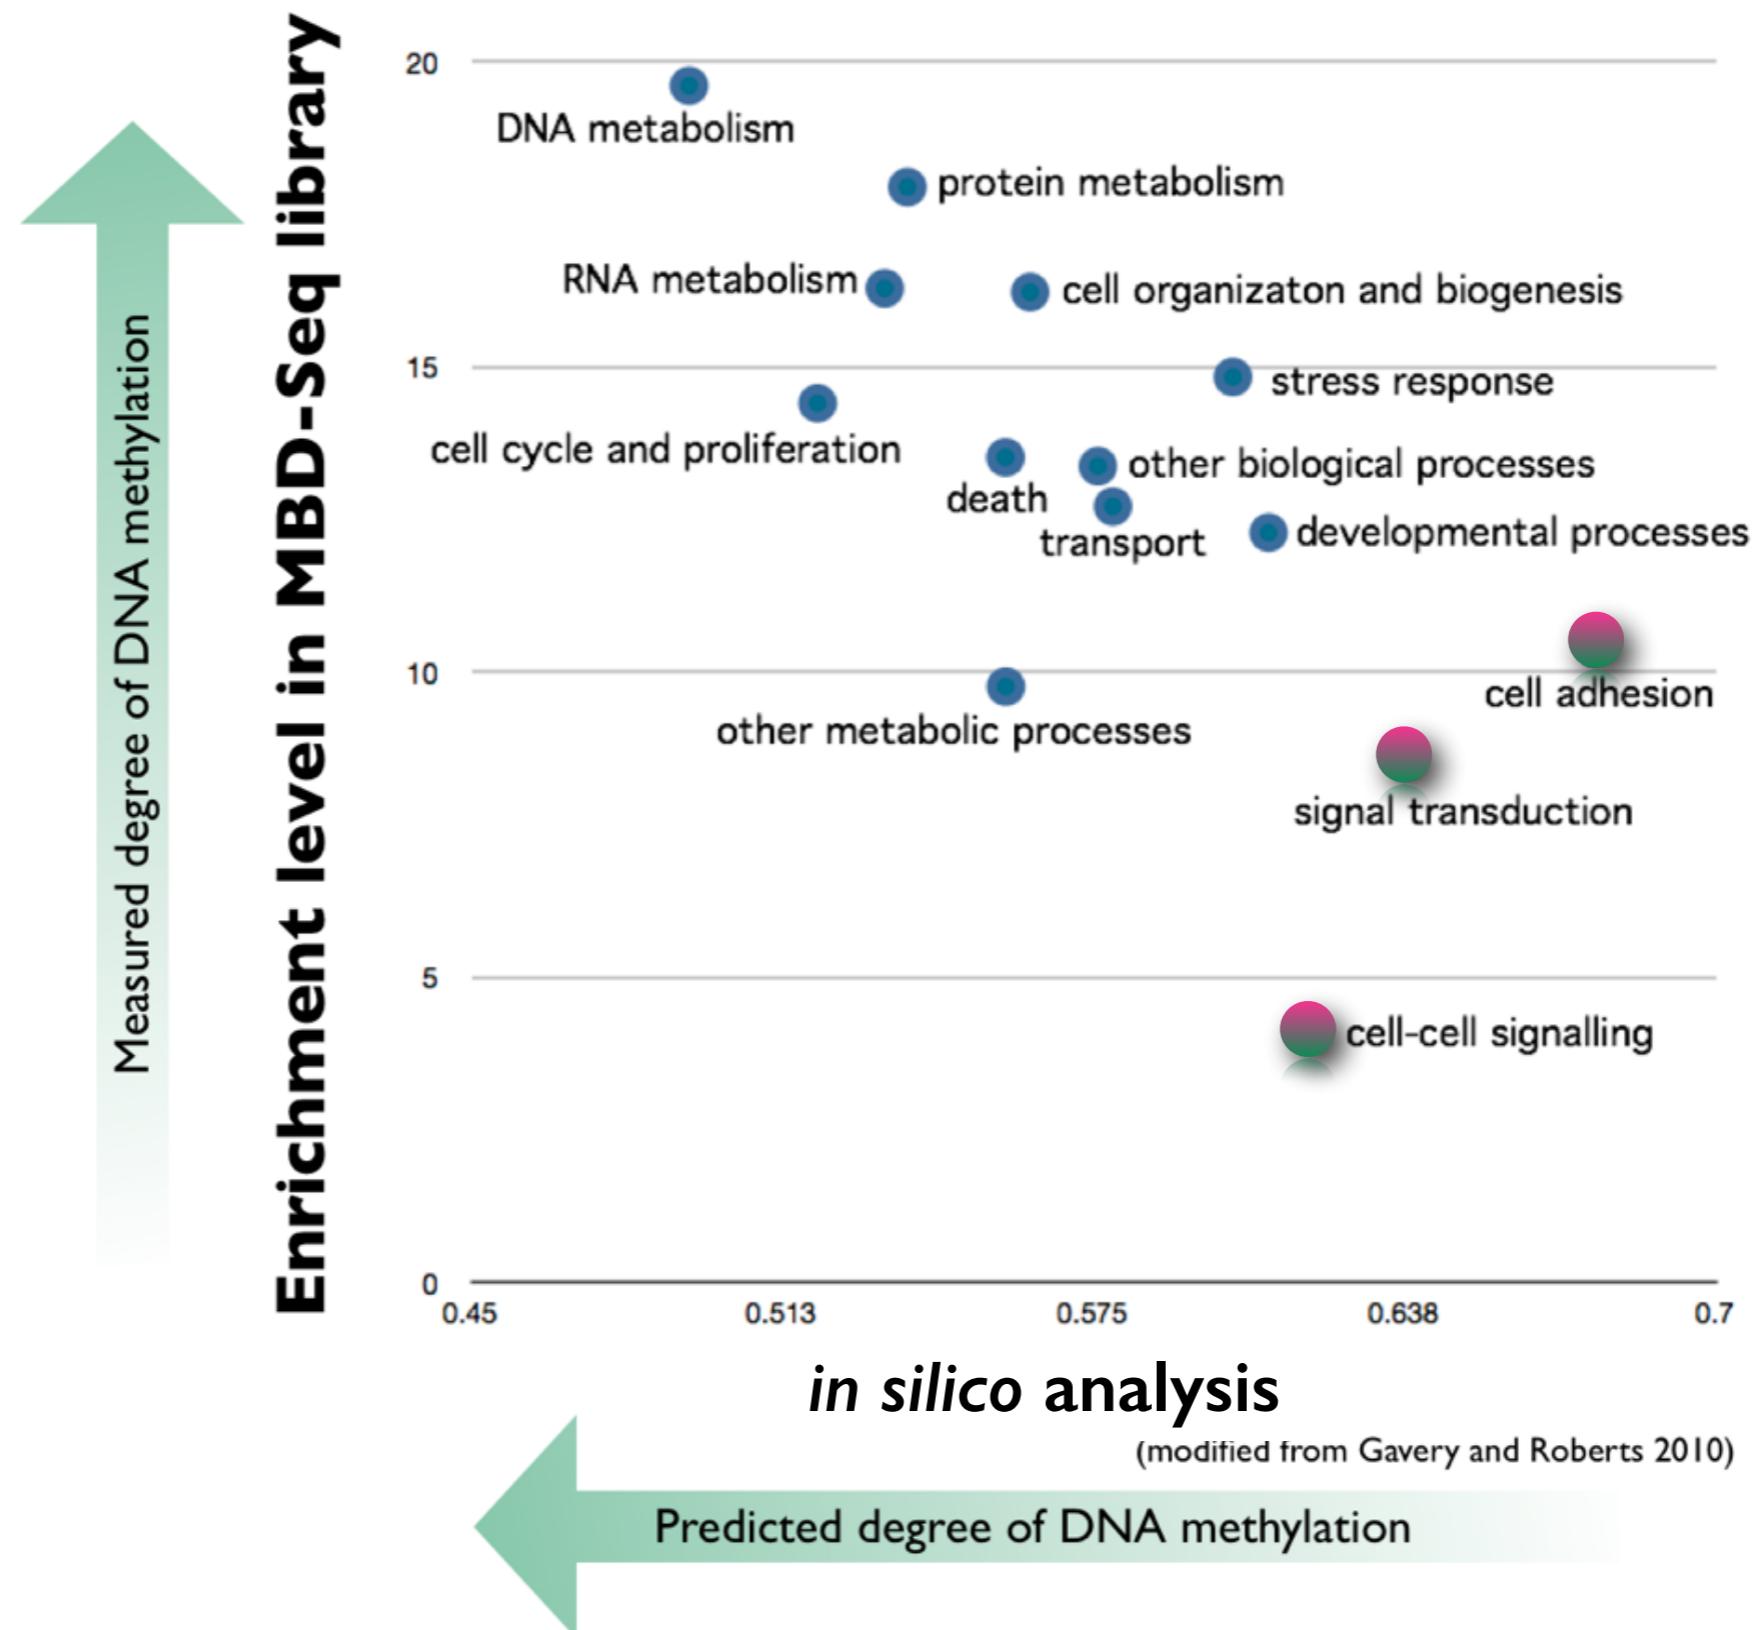

$$\text{CpG O/E} = \frac{\text{CpG observed}}{\text{CpG expected}}$$

high = unmethylated

Epigenetic variation **1**

**Indication of family-specific DNA methylation patterns in developing oysters**

Claire E. Olson , Steven B. Roberts  
doi: <http://dx.doi.org/10.1101/012831>

Epigenetic variation **1**

Differentially methylated loci in gene bodies could be lethal or deleterious, as they would alter gene expression.

Another possibility is that differentially methylated loci may provide advantageous phenotypic variation by increasing transposable element mobility.

To execute the IPython Notebook in its entirety you will need:

- IPython - [install instructions](#)
- BSMAP - [install instructions](#)
- bedtools - [install instructions](#)
- R - [install instructions](#)
- rpy2 (interface to R from Python) - [install instructions](#)

- Sparsely (~16 %), mosaïc methylated genome
- Gene body methylation correlated with function
- DNA methylation patterns are inherited
- DMRs are predominant in transposable elements

Epigenetic variation

Theory: **Does not** influence expression level  
but rather alternative splicing.

## A context dependent role for DNA methylation in bivalves

Mackenzie R. Gavery and Steven B. Roberts

Advance Access publication date 7 January 2014

In species that experience a diverse range of environmental conditions, processes have evolved to increase the number of potential phenotypes in a population in order to improve the chances for an individual's survival.

more questions....  
interesting but what is controlling?

# Take Home

*Oyster genome has a fantastic degree of diversity contributing to phenotypic plasticity & adaptation potential.*

# Take Home

*Oyster genome has a fantastic degree of diversity contributing to phenotypic plasticity & adaptation potential.*

- large gene families
- very high mutation rate (snp/50bp)
- numerous exons per gene (potential for alternatives)
- genome full of repeats region
- high number of transposable elements
- lack of methylation of transposable suggest mobility
- family variation of methylation
- limited methylation environmental response genes  
is associated with spurious transcription
- inheritance of epigenetic marks as mechanism of improved adaptation

### About the *Crassostrea gigas* contigs database

#### Assembly

The Oyster EST contig browser aims to produce and maintain an automatic annotation of Oyster EST libraries. This database [GigasDatabase](#) was initiated within the frame of the [AquaFirst](#) European project, it now gathers EST sequences produced by a [Marine Genomics Europe](#) project (GOCE-CT-2004-505403) and a [Genoscope project](#). [GigasDatabase](#) is regularly updated in the context of the ANR project "Gametogenes" (ANR-08-GENM-041).

#### Annotation

Contigs were annotated searching sequence homologies against following databases:

- ▶ UniProtKB/Swiss-Prot Release 2011\_03 of 08-Mar-2011
- ▶ RefSeq Protein Index Blast of 09-Jan-2011
- ▶ Pfam Release 24.0 of Jul-2009
- ▶ Sigenae Oyster Contigs V8
- ▶ RefSeq RNA Index Blast of 09-Jan-2011
- ▶ TIGR Fugu FGI 3.0

### Statistics

Assembly: pcg8, Mar 2011

Number of base pairs (Contigs): 67,875,621

Number of sequences (EST/mRNA): 1,013,570

Total number of contigs: 82,312

Number of singlets: 20,148

Polymorphism: Mar 2011

Number of putative SNPs: 29,493

Number of contigs including SNP: 10,392

# Raw Data

1) As sequencing facility provides data, files are downloaded to our local NAS (owl), in the root `nightingales` directory.  
<http://owl.fish.washington.edu/nightingales/>

2) The Nightingales Google Spreadsheet is updated.

3) Update the Nightingales Google Fusion Table with new information from the Nightingales Google Spreadsheet. This is accomplished by:

- deleting all rows in the Nightingales Google Fusion Table (Edit > Delete all rows)
- Importing data from the Nightingales Google Spreadsheet (File > Import more rows...)

4) Once metadata is included in the Google Fusion Table [Nightingales](#), respective data files are moved to subdirectory labelled with first letter of genus followed by species ie `c_gigas`. Check url in Nightingales Fusion table to ensure it is accurate.

**Nightingales**

# Querying Disparate Datasets

## Querying Disparate Oyster Datasets | qDOD

The goal of this project is to produce a web-based interface for querying and visualizing *Crassostrea gigas* genomic datasets. This site serves as a portal for documenting our efforts, providing user access, as well as a means to gather feedback.

DATA

### Preliminary Phase: Aggregating Datasets

Using SQLShare as a platform we have already begun to aggregate and format data. Anyone can view (and contribute) using the tag "qdod". Below is a table describing some of the relevant datasets. "Snapshot" provides you with a screenshot of the data in SQLShare and "Direct Link" brings you directly to the data in SQLShare. You can also open the table in a new webpage.

Why do you put your lab notebook and data online? The usual follow up to that question is "what if someone steals your research?". I would say that it is a possibility. Others are concerned with intellectual property and respect persons have their ... Read More

Research Research in our lab focuses on characterizing physiological responses of marine organisms to environmental change. Using integrative approaches we strive to examine impacts and adaptive potential from the nucleotide to organismal level. A core component of this includes investigating the functional relationship of genetics, epigenetics, and transcription.

Outreach We are continually looking for new ways to engage and share with students, scientists, and the general public. Everyone can follow us on tumblr, facebook, youtube, swimmer, wikispace, flickr, and figshare. Web-based resources we have developed include an online version of the Colton Shelfish Collection, grants, publications, research notes on ocean acidification and oysters, and an archive.

News and Notes - Congrats to Mackenzie Gaverty, who won a Student Spotlight Award at Aquaculture 2013.

MethylKit w/ Final BiGO and BiGill files

modify Methratio outputs to format needed for methylKit in SQLShare

starting file for Gill: BiGill\_methratio\_v9\_A  
starting file for Gonad: BiGO\_betty\_plain\_methratio\_v1

Used 3 steps in SQLshare -  
here is workflow for gill:  
step1  
SELECT  
    chr as chr,  
    pos as start,  
    '+' as strand,  
    cast (CT\_count as float) as CT\_count,  
    cast (C\_count as float) as C\_count  
FROM [sr320@washington.edu].[BiGill\_methratio\_v9\_A.txt]  
    where  
context like '\_\_CG\_'  
and  
    CT\_Count >= 5  
and  
    ratio <> 'NA'  
step2  
SELECT  
    chr as chr,  
    start as start,  
    strand as strand,  
    CT\_count as CT\_count,  
    C\_count as C\_count,  
    C\_count/CT\_count as freqC  
FROM [mgaverry@washington.edu].[test]  
step3  
SELECT  
    chr as chr,  
    start as start,  
    strand as strand,  
    CT\_count as CT\_count,  
    freqC as freqC,  
    1-freqC as freqT  
FROM [mgaverry@washington.edu].[test2]  
--  
name of step3 table: [mgaverry@washington.edu].[BiGill\_v9\_A\_MethylKit]

## Fasta2Slim

This IPython notebook is intended to serve as a structured means to annotate sequences using UniProt/SwissProt database. The notebook can be easily modified to personal preferences. As developed, the notebook requires the user has the following software installed ...

- IPython
  - NCBI Blast
  - SQLShare Python Client

## **Instructions for use.**

In a working directory of your choosing place query fasta file, naming as `query.fa`. Edit the cell below, providing the path to said working directory.

Identify the location of the blast database you would like to use and indicate path in the cell below.

Identify the location of your `sqlshare-pythonclient/tools` and indicate path in the cell below.

Change the input to the `usr` variable to reflect your SQLShare user account.

```

**IPython Notebook for downloading and analyzing data  
the manuscript: "Indication of family-specific DNA  
methylation patterns in developing oysters"**

bioRxiv preprint - <http://dx.doi.org/10.1101/012831>

To execute the IPython Notebook in its entirety you will need:

- IPython - [install instructions](#)
- BSMP - [install instructions](#)
- bedtools - [install instructions](#)
- R - [install instructions](#)
- rpy2 (interface to R from Python) - [install instructions](#)

## Plot GoSlim terms

```
In [10]: pylab inline
```

Populating the interactive namespace from numpy and matplotlib

```
In [11]: cd {wd}
```

```
/Users/sr320/Desktop/test
```

README.md

### IPython Notebooks and data supplemental to the manuscript: *"Up in arms: Immune and nervous system response to sea star wasting disease"*

The repository includes IPython notebooks (.ipynb file) that can be downloaded locally and interactively executed. The code in the IPython notebook `eimd_analysis.ipynb` will process data such that figures in the manuscript are reproduced (in theory).

### Description of Files

- `eimd_analysis.ipynb` - IPython notebook that can be interactively executed locally or viewed online designed so that user can **replicate all analysis**. Requires several dependancies (see below). [nbviewer version](#)
- `eimd_data-only.ipynb` - IPython notebook that can be interactively executed locally or viewed online designed so that user can **simply explore** data files. *Only requires IPython*. [nbviewer version](#)
- `data/Phel_transcriptome.fasta` - P hel coelocytes transcriptome. Contains xxxx contigs from de novo assembly.
- `data/Phel_countdata.txt` - Tab-delimited text file with read count data from 6 P hel RNA-seq libraries, 3 treated and 3 control libraries.
